I. Informed Consent

The Health Care Decisions Act does not affect the doctrine of informed consent, which applies to treatment issues in the current clinical context. A patient with capacity has the right to decide these issues, including whether life-sustaining procedures should be used.

II. Definition of Medical Conditions Specified in the Act

Terminal Condition: An incurable condition that makes death “imminent.” The term “imminent” is not defined, so the determination is left to reasonable medical judgment.

End-Stage Condition: An advanced, progressive, irreversible condition caused by injury, disease, or illness: (1) that has caused severe and permanent deterioration indicated by incompetency and complete physical dependency; and (2) for which, to a reasonable degree of medical certainty, treatment of the irreversible condition would be medically ineffective. Death need not be “imminent.”

Persistent Vegetative State: An irreversible loss of consciousness, despite reflexive nerve and muscle activity.

III. Advance Directives

The Act allows an adult (or an emancipated minor) who has decision-making capacity to deal with future health care issues by any of the following three methods:

- written instructions authorizing the provision, withholding, or withdrawal of health care, sometimes called a decisional directive or living will;

* This summary does not contain full detail about every topic. The full text of the Act is available at http://www.oag.state.md.us/Healthpol/HCDATAtext.pdf.
• a written appointment of an agent to make health care decisions for the patient, sometimes called a proxy directive or durable power of attorney for health care; and

• an oral statement to a physician, physician assistant, or nurse practitioner leaving instructions or appointing an agent.

**Legal Requirements:** Legal Requirements: To meet the Act’s requirements, a written advance directive must be witnessed by two adults; neither witness may be the person’s health care agent, and at least one witness must have no financial interest in the person’s death. It need not be notarized. Advance directives created entirely by electronic means are authorized. The advance directive’s electronic signatures must meet certain technical requirements. A properly signed electronic advance directive may be unwitnessed if the person’s identity is authenticated in accordance with the National Institute of Standards and Technology Special Publication 800-63-2: Electronic Authorization Guideline, or if replaced, the replacement guideline. An oral advance directive must be made to a physician, physician assistant, or nurse practitioner with one witness present, documented in the patient’s medical record, and signed and dated by the physician, physician assistant, or nurse practitioner and the witness.

If a health care agent is named, the health care agent may not be an employee, owner, or operator of a health care facility where the patient is being treated, unless that individual would also qualify as a surrogate. An agent may not be an individual who is the subject of a protective order regarding the patient. If the patient and the patient’s spouse have executed a separation agreement or one of them has filed for divorce, the spouse may not be an agent unless the patient indicated an intent to have the spouse serve as the patient’s agent anyway.

**Forms:** Individuals may prepare documents worded as they choose. The Act includes an optional advance directive form, allowing individuals to appoint a health care agent; specify whether or not they want life-sustaining procedures if they are in a terminal condition, persistent vegetative state, or end-stage condition; or both. The form allows individuals, if they wish, to make a different decision regarding the provision, withholding, or withdrawal of artificial nutrition and hydration.

**Implementing Instructions:** If an advance directive does not name a health care agent but does instruct that life-sustaining procedures be withheld or withdrawn in the event of a terminal or end-stage condition or persistent vegetative state, the advance directive may be implemented only if the patient’s attending physician and a consulting physician certify, to a reasonable degree of medical certainty, that the patient is in one of these three conditions.

**Authority of Agent:** A health care agent’s authority is defined by the individual creating the advance directive. Unless the advance directive provides otherwise, a health care
agent has authority to decide about life-sustaining procedures and, unlike a surrogate
decision maker, may decide to forgo life-sustaining procedures even if the patient has
not been certified to be in one of the Act’s three specified conditions. Unless the advance
directive provides otherwise, an agent is to make a decision that is consistent with the
patient’s wishes or, if those wishes are unknown or unclear, that is in the patient’s best
interests. If the individual has given unambiguous instructions about life-sustaining
procedures in the same or another legally valid advance directive that are intended to
be followed strictly, the agent is obliged to carry out those instructions.

Pregnancy: The optional statutory form has space for a woman to say whether
pregnancy would have any effect on her decision about life-sustaining procedures.

Organ Donation: The Act includes an optional form called “After My Death” that may
be used to donate organs or tissue, to donate one’s body for medical research, and to
indicate desired funeral arrangements. Note: if a person wishes to donate his or her
body for medical research, it is critical that prior arrangements be made with the
institution to which the body is to be donated. The Maryland Anatomy Board may also
be contacted at 1-800-879-2728.

IV. Surrogate Decision Making

If a patient has not picked a health care agent, or if no health care agent is
available, and the patient is no longer able to make health care decisions personally, as
determined by two physicians, a surrogate has authority to make these decisions.
Surrogates are listed in priority order; individuals in a particular class may be consulted
only if all individuals in the next higher class are unavailable: (1) a guardian of the
person, if one has been appointed; (2) the patient’s spouse or domestic partner; (3) an
adult child of the patient; (4) a parent of the patient; (5) an adult brother or sister of the
patient; or (6) a friend or other relative of the patient who briefly describes, in an
affidavit, enough regular contact with the patient so as to make the surrogate familiar
with the patient’s activities, health, and personal beliefs. No particular form of affidavit
or other documentation of surrogate status is specified in the Act. An individual who is
the subject of a protective order regarding the patient may not be a surrogate. If the
patient and the patient’s spouse have executed a separation agreement or one of them
has filed for divorce, the patient’s spouse may not be a surrogate.

Disputes Among Surrogates of Same Class: A health care provider must refer these
disputes to a patient care advisory committee (often called an “ethics committee”). If
the committee makes a recommendation, the patient’s physician may follow it without
risking liability for suits based on lack of consent or authorization.
Standards for Surrogates: A surrogate is to make a decision that is consistent with the patient’s wishes or, if those wishes are unknown or unclear, that is in the patient’s best interests. The Act includes factors for the surrogate to consider in determining the patient’s wishes. It also includes a definition of “best interest.”

Surrogates and Life-Sustaining Treatment: A surrogate may consent to the withholding or withdrawal of life-sustaining procedures if the patient’s attending physician and a consulting physician certify, to a reasonable degree of medical certainty, that the patient has a terminal or end-stage condition or is in a persistent vegetative state. A surrogate may not consider a patient’s pre-existing, long-term mental or physical disability in making a decision to withhold or withdraw life-sustaining procedures. A surrogate who is a guardian usually must obtain the court’s permission to authorize the withholding or withdrawal of life-sustaining procedures.

V. Medical Orders for Life-Sustaining Treatment (MOLST) form

A “Medical Orders for Life Sustaining Treatment” or “MOLST” form contains medical orders regarding life-sustaining treatments, the use of medical tests, whether to transfer a patient to a hospital and any other matter considered appropriate by the Department to implement the treatment preferences of patients. A MOLST form is not an advance directive. A MOLST form contains written medical orders related to a patient’s medical condition.

The Department of Health must adopt regulations that specify the MOLST form and its instructions. The Department’s regulations regarding the MOLST form are contained in COMAR 10.01.21.

In accordance with the Department’s regulations, certain health care programs and facilities are required to complete a MOLST form for each newly admitted patient and must offer the patient, the health care agent, or the surrogate decision maker the opportunity to participate in the completion of the MOLST form. These health care providers include nursing homes, assisted living programs, home health agencies, hospices, kidney dialysis centers, and hospitals. Hospitals are only required to complete a MOLST form for an inpatient who is to be transferred or discharged to the care of one of these health care programs or facilities. Other health care providers may voluntarily choose to use a MOLST form. If they do so, they must offer the patient, the health care agent, or the surrogate decision maker the opportunity to participate in the completion of the MOLST form.

Unless a MOLST form’s order is based on the medical ineffectiveness of a treatment, an order contained in a MOLST form must be consistent with a legally effective advance directive and the known wishes of a patient, health care agent, or
surrogate decision maker. A health care provider may rely in good faith on the presumed validity of a MOLST form.

Every time a physician, physician assistant, or nurse practitioner completes a MOLST order form, a copy of the form must be provided to a competent patient, health care agent, or surrogate decision maker within 48 hours after completing the MOLST form. The MOLST form must accompany a patient when the patient is transferred to another health care facility or program.

More information about the MOLST form is available on the website Marylandmolst.org.

VI. Patient Safeguards

• A health care provider who believes that an instruction to withhold or withdraw life-sustaining procedures from a patient is inconsistent with generally accepted standards of patient care must bring the matter to a facility’s patient care advisory (ethics) committee or file a petition in court.

• Family members and qualified surrogates may file suit to enjoin allegedly unlawful actions. These cases are to be given expedited consideration by the courts.

• A person loses immunity for decisions involving life-sustaining procedures if the person did not comply with the Act in good faith.

• Mercy killing, euthanasia, and assisted suicide are not authorized under any circumstances. Criminal penalties are provided for destruction, concealment, or forgery of an advance directive document.

VII. Medically Ineffective Treatment and Transfers

Physicians’ Authority: A physician or physician assistant need not provide treatment that the physician or physician assistant believes to be ethically inappropriate or that a physician believes to medically ineffective. Medically ineffective treatment is defined as treatment that, as certified by the attending and a consulting physician to a reasonable degree of medical certainty, will neither prevent or reduce the deterioration of the health of an individual nor prevent the impending death of an individual.

Transfers: If a health care provider intends not to comply with the instruction of a surrogate or agent, the provider must inform the person giving the instruction of that decision and inform the person that he or she may request a transfer to another health
care provider. Pending the transfer, a health care provider must comply with a legally valid request for treatment made by a competent patient, surrogate, or agent if failure to comply would result in the death of the patient.

VIII. Emergency Medical Services (EMS) and DNR Orders

The Maryland Institute for Emergency Medical Services Systems has developed a palliative care protocol for use by emergency medical services personnel. Only the MOLST form, the previous EMS/DNR form, a copy of it, or an approved bracelet or necklace, or an oral order from a physician, physician assistant, or nurse practitioner on the scene or through online medical direction will be acknowledged by emergency medical services personnel. When other health care professionals treat a patient with an EMS/DNR order or a MOLST form containing a DNR order, they must follow the DNR order if the patient has a cardiopulmonary arrest.

IX. Legal Immunity

Health care providers who take actions based on the Act are immune from claims that the actions were unauthorized. Health care agents and surrogates who follow the Act when they authorize the withholding or withdrawal of life-sustaining procedures are immune from liability.

X. Additional Information

The text of the Health Care Decisions Act, additional explanatory material about it, an “ethical framework” for implementing the Act, an advance directive form and related materials, a handbook for health care agents and surrogates, and numerous legal opinions and advice letters may be found on the Attorney General’s web site. The home page is: www.marylandattorneygeneral.gov. From there, click on “Advance Directives/Living Wills.”
